👤 SUMMARY

Computer and Automation Engineering student at Università Politecnica delle Marche, specializing in web and mobile development. Experienced with full-stack web technologies (TypeScript, Svelte, Astro, Supabase) and cross-platform mobile (Flutter/Dart, Kotlin/Android). Strong practical background from independent projects and professional experience. Eager to learn and develop in any environment, including abroad

🎓 EDUCATION

BSc Computer & Automation Engineering,
Università Politecnica delle Marche (UNIVPM)

2023 – Present | Ancona, Italy

Diploma — Information & Communication Technologies,
IIS Marconi Pieralisi
• Grade: 79/100

2017 – 2023 | Jesi, Italy

💼 EXPERIENCE

Software Developer (Internship), Loccioni Group

07/2023 – 09/2023 | Moie, Italy

- Contributed to software development and project planning within an agile team environment.
- Performed hardware maintenance and supported IT infrastructure across production systems.

🧠 SKILLS

Frontend (HTML | CSS | JavaScript | TypeScript | Svelte (familiar) | Astro | React (familiar))

Mobile (Flutter/Dart | Kotlin (Android))

Backend (Python | Java | C# | SQL | Supabase | REST APIs)

Tooling (Git | GitHub | Figma | Vercel | Trigger.dev)

📁 PROJECTS

OWCS Nexus, Astro · Svelte · TypeScript · Supabase · Trigger.dev · Vercel

- Fan-built statistics platform for the Overwatch Champions Series esports league with real-time data sync.
- Implemented ELO rating system and hero ban statistics, based on the official Liquipedia API and updated hourly via cron jobs

Fuelly, Flutter/Dart · Kotlin · Supabase · Python · GitHub Actions

- Italian fuel price finder app built for a Mobile Programming course in university, implemented in both Android (Kotlin) and Flutter with Dart.
- Built a Python scraper pulling daily fuel data from Italy's MIMIT ministry's public CSVs files and EV charger data from Open Charge Map's official API, deployed via GitHub Actions on a daily cron.
- Full UI designed in Figma before implementation.
